DESCRIPTION

Online Medicine Shopping

As online shopping emerged ,for clothing,accessories and many more ,many people started buying them online,as the will be busy,no need of going outside as it will be delivered to the specified address.The era of social media and internet is dominating the world,everything around is online,so why can't we get our medicines from the online medical shop?

The benefits for using this online medical shopping are as follows:

1) Convenient:

   Online Pharmacy serves a convenient way of buying medicines for old age,physically challenged and working professionals,due to the difficulty for them to go to local medical shop.

2)Systematic.

3)Facilitate useful information.

4)Easy secured payments.

5)Cost efficient:

The cost of medicine purchased from E-pharmacy is lower than local medical shop because in online pharmacy the medicine comes directly in store from the manufacturer, there is no third party. They also provide a discount on the price for any products purchased in bulk.

We the people think about the questions like "How does the pharmacy model work and all?"

So we have a small description about it. As we know Online pharmacy provides a mobile based application for customers, where they can search for the medicine.

Before the delivery of the medicine to the consumer, every order received is to be verified and checked by registered pharmacists.

The project has been developed on HTML, CSS, JavaScript, Php, MySQL .The main objective of developing the project was to create the website for pharmacy, medicine order, from which the user can get the complete details of the medicines such as images, medicine, addresses etc.

PAGES OF THE PROJECT :

Home page:This page contains the basic information of the medicine system such as login, register ,about us, contact us, categories, gallery of the products, queries .

➡ About page: It contains all about the medicine system information and the working.

➡ Gallery page : It contains all the images about pharmacy management.

➡ Register Page: Here users can easily register on the pharmacy website and confirmation messages will be displayed after registering.

➡ Login: user can log in on the website. They have to fill the details like mobile number and password. If they have forgotten the password then they can create a new password.

➡ Contact Page: User can contact to the team if they have any queries and they find the contact details.

➡ Category Page: In this page user finds all the categories, based on them they can select and search and can easily find the products, medicines.

TECHNOLOGY USED :

We have devolped the project using:

➡ HTML: Page Layout has been designed in HTML. It is used in front end.

➡ CSS: CSS has been used for all the designing part.It is used in front end.

➡ JavaScript: All the validation task and animations have been developed by JavaScript. It is used in front end.

➡ SQL: It is used for the Database.
